ARSHITA SIKARIA

+91-7014973052 | arshita0003@gmail.com | linkedin.com/in/arshita-sikaria-92677b288 | github.com/arshitasikaria

CAREER OBJECTIVE

Final-year MCA student with a curious, analytical approach to solving real-world problems through Python, Java, Django, and MySQL, backed by applied machine learning experience (Scikit-learn, XGBoost, CNNs). Comfortable navigating unfamiliar requirements independently, learning by building, and iterating from a first working version to a better one — with a methodical approach to debugging and root-cause analysis. Known for taking ownership, learning quickly from setbacks, and finding simpler, more effective solutions. Looking to bring this problem-solving mindset to a collaborative, Agile team where I can take on challenging problems and create real impact.

EDUCATION

MIT World Peace University, Pune — Jul 2025 – Present
Master's in Computer Application (MCA), Computer Science | CGPA (Sem 2): 7.68 | GPA: 8.00

Alankar PG Girls College, Jaipur — Jul 2022 – 2025
Bachelor of Computer Applications (BCA) | CGPA: 7.9

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL
- **Full-Stack Development:** Django, Streamlit, Servlets, JSP, JDBC, HTML, CSS, Bootstrap, MVC Architecture, Session-Based Authentication, CRUD Operations
- **Databases:** MySQL
- **Machine Learning / AI:** Machine Learning, Scikit-learn, XGBoost, Regression, Predictive Modeling, Feature Engineering, Model Evaluation, Exploratory Data Analysis (EDA), OCR-Based Extraction
- **Deep Learning:** FNN, CNN, RNN, LSTM
- **Data Analytics & Visualization:** Pandas, NumPy, Matplotlib, Power BI, Tableau, Microsoft Excel, Data Analysis, Data Visualization
- **Developer Tools & Practices:** Git, GitHub, VS Code, Eclipse/STS, Apache Tomcat, Jupyter Notebook, Google Colab, AI-Assisted Coding Tools

PROJECTS

Supply Chain & Inventory Analytics | *MySQL, SQL* — github.com/arshitasikaria/Supply-Chain-Inventory-Analytics

- Designed a normalized relational database of 8 interconnected tables (categories, suppliers, products, warehouses, inventory, purchase orders, customers, sales orders) to model end-to-end supply chain and inventory operations.
- Wrote 20+ analytical SQL queries (joins, subqueries, CTEs, window functions, views) solving 10+ business problems across inventory, sales, suppliers, and customers — e.g., low-stock alerts, top products, revenue by category, and delayed-delivery tracking.

FoodCalorieAI – CNN-Based Food Classification & Calorie Estimation | *Python, TensorFlow/Keras, Streamlit*
github.com/arshitasikaria/FoodCalorieAI

- Built a CNN-based deep-learning web app using MobileNetV2 transfer learning (224×224 input) to classify Indian food images across 10 food categories, returning top-3 prediction probabilities with a confidence score.
- Engineered a nutrition-estimation layer computing calories, protein, carbohydrates, and fat for an adjustable serving size range of 50g–500g, delivered through an interactive Streamlit interface.

RoadRisk AI – Road Safety Management & Accident Severity Prediction | *Django, MySQL, Power BI*
github.com/arshitasikaria/RoadRisk-AI

- Architecting a full-stack road-safety platform (Django, MySQL) that predicts accident severity using a Random Forest/XGBoost model, serving 3 distinct portals (public, registered user, admin) with AI-generated safety tips.
- Mapped all 15 application screens and a 7-phase build roadmap end-to-end; currently implementing the Django backend and MySQL schema, training the severity-prediction model, and building Power BI dashboards to visualize accident trends and high-risk zones.

Internship Management System | *Java, Servlets, JSP, JDBC, MySQL, Apache Tomcat* — github.com/arshitasikaria/Internship-System

- Built a full-stack Java web application using MVC architecture, enabling students to register, browse, and apply for internships, and administrators to manage postings and applications end-to-end.
- Implemented session-based authentication, CRUD operations across student/internship/application records, and an admin approval workflow; deployed and tested on Apache Tomcat.

CERTIFICATIONS

- Cisco Certified Support Technician (CCST): Networking – 6 hours
- Cisco Introduction to Cybersecurity
- Python Programming – Growth Ninja – 20 hours
- Power BI Fundamentals

ACHIEVEMENTS & ACTIVITIES

- Participated in multiple hackathons under time-boxed, team-based conditions, collaborating on rapid, Agile-style build cycles.
- Actively strengthening Data Structures & Algorithms; maintains all personal and academic projects on Git/GitHub with structured commit history.
